### pyvirtualdisplay

Date July 05, 2011

PDF pyvirtualdisplay.pdf

Contents:

pyvirtualdisplay is a python wrapper for Xvfb and Xephyr

home: https://github.com/ponty/PyVirtualDisplay

documentation: http://ponty.github.com/PyVirtualDisplay

#### Possible applications:

• GUI testing

• automatic GUI screenshot

CONTENTS 1

**ONE** 

## **BASIC USAGES**

#### Start Xephyr:

```
from pyvirtualdisplay import Display
xephyr=Display(visible=1, size=(320, 240)).start()

Create screenshot of xmessage with Xvfb:

from easyprocess import EasyProcess
from pyvirtualdisplay.smartdisplay import SmartDisplay
disp = SmartDisplay(visible=0, bgcolor='black').start()
xmessage = EasyProcess('xmessage hello').start()
img = disp.waitgrab()
xmessage.stop()
disp.stop()
img.show()
```

**TWO** 

## **INSTALLATION**

#### 2.1 General

- install Xvfb and Xephyr.
- install setuptools or pip
- optional: pyscreenshot and PIL should be installed for pyvirtualdisplay.smartdisplay
- install the program:

if you have setuptools installed:

```
# as root
easy_install pyvirtualdisplay
```

#### if you have pip installed:

```
# as root
pip install pyvirtualdisplay
```

#### 2.2 Ubuntu

```
sudo apt-get install python-setuptools
sudo apt-get install xvfb
sudo apt-get install xserver-xephyr
sudo easy_install pyvirtualdisplay
# optional
sudo apt-get install python-imaging
sudo apt-get install scrot
sudo easy_install pyscreenshot
```

#### 2.3 Uninstall

```
# as root
pip uninstall pyvirtualdisplay
```

### **THREE**

## **USAGE**

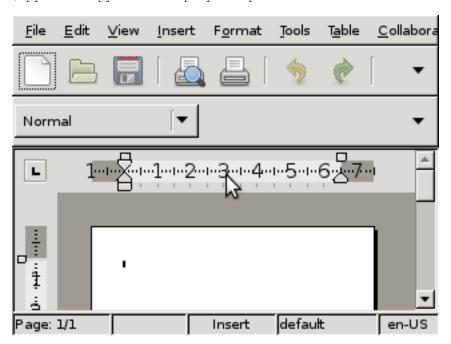

### 3.1 GUI Test

Testing abiword on low resolution:

```
from easyprocess import EasyProcess
from pyvirtualdisplay import Display

Display(visible=1, size=(320, 240)).start()
EasyProcess('abiword').start()
```

\$ python -m pyvirtualdisplay.examples.lowres

## 3.2 Screenshot

Create screenshot of xmessage in background:

```
from easyprocess import EasyProcess
from pyvirtualdisplay.smartdisplay import SmartDisplay

disp = SmartDisplay(visible=0, bgcolor='black').start()
xmessage = EasyProcess('xmessage screenshot').start()
img = disp.waitgrab()
xmessage.stop()
disp.stop()
img.show()

$ python -m pyvirtualdisplay.examples.screenshot1

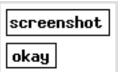

screenshot
okay
```

The same with wrap() function:

```
from easyprocess import EasyProcess
from pyvirtualdisplay.smartdisplay import SmartDisplay

disp = SmartDisplay(visible=0, bgcolor='black')
func = disp.wrap(EasyProcess('xmessage screenshot').wrap(disp.waitgrab))
img=func()
img.show()

$ python -m pyvirtualdisplay.examples.screenshot2
```

okay

The same using with statement:

```
""
using :keyword: 'with' statement
""

from easyprocess import EasyProcess
from pyvirtualdisplay.smartdisplay import SmartDisplay
with SmartDisplay(visible=0, bgcolor='black') as disp:
    with EasyProcess('xmessage screenshot'):
        img = disp.waitgrab()

img.show()

$ python -m pyvirtualdisplay.examples.screenshot3
```

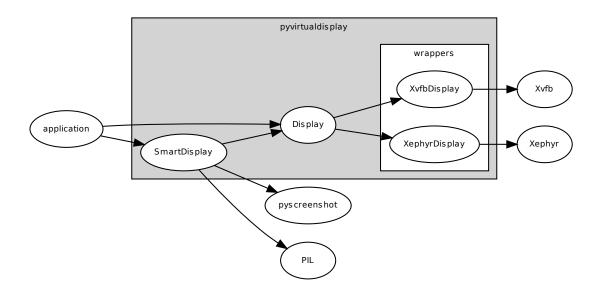

3.2. Screenshot 5

## **FOUR**

## API

```
class pyvirtualdisplay.Display (visible=False,
                                                           size = (1024,
                                                                          768),
                                                                                   color\_depth=24,
                                                                                                       bg-
     color='black')
Common class for XvfbDisplay and XephyrDisplay
      start()
           start display
               Return type self
      stop()
           stop display
               Return type self
     wrap (callable, delay=0)
           returns a function which:
                 1. start process
                2. call callable, save result
                 3. stop process
                4. returns result
           similar to with statement
               Return type
```
